

The numeric-comp style

This style is similar to `numeric` except that a list of multiple citations is sorted and any sequence of more than two consecutive numbers is formatted as a range. This style will implicitly enable the `sortcites` package option at load time.

Additional package options

The subentry option

The option `subentry` affects the handling of citations referring to members of a reference set. If this option is enabled, such citations get an extra letter which identifies the member (it is also printed in the bibliography): [3b, 7a, 8, 13c, 15c].

This option is disabled by default, but it has been enabled in this example. If disabled, citations referring to a set member will point to the entire set, i.e., the above citations would come out as [1, 2, 8].

Multiple citations

[4, 5]
[4–6, 8, 11]
[2, 4–6, 9, 11, 12]
[1, 2, 4–6, 8, 9, 11, 12]
[14b, 15c]

Multiple citations with \supercite

This is just filler text.^{4,5}
This is just filler text.^{4–6,8,11}
This is just filler text.^{2,4–6,9,11,12}
This is just filler text.^{1,2,4–6,8,9,11,12}
This is just filler text.^{14b,15c}
